

# MR Passenger Elevator

## Hoistway Structure

Concrete  Brick & Concrete  Other

Unstandard  Standard

NOTE

Technical Requirement:

HW	HOISTWAY WIDTH	CW	CAR INSIDE WIDTH	Type	TKJ800 / 2.0 -VF		
HD	HOISTWAY DEPTH <td>CD</td> <td>CAR INSIDE DEPTH <td>F/P/D</td> <td>/</td> <td>/</td> <td>Door type Center open</td> </td>	CD	CAR INSIDE DEPTH <td>F/P/D</td> <td>/</td> <td>/</td> <td>Door type Center open</td>	F/P/D	/	/	Door type Center open
OP	DOOR OPENING WIDTH <td>CH</td> <td>CAR HEIGHT <td>load</td> <td>800</td> <td>kg</td> <td>speed 2.0 m/s</td> </td>	CH	CAR HEIGHT <td>load</td> <td>800</td> <td>kg</td> <td>speed 2.0 m/s</td>	load	800	kg	speed 2.0 m/s
ROP	WALL OPENING WIDTH <td>MRW</td> <td>MACHINE ROOM WIDTH <td>Machine</td> <td>MCK200</td> <td>Roping</td> <td>2 : 1</td> </td>	MRW	MACHINE ROOM WIDTH <td>Machine</td> <td>MCK200</td> <td>Roping</td> <td>2 : 1</td>	Machine	MCK200	Roping	2 : 1
OPH	DOOR OPENING HEIGHT <td>MRD</td> <td>MACHINE ROOM DEPTH <td>T/sheave</td> <td>φ 400</td> <td>D/sheave</td> <td>φ 400</td> </td>	MRD	MACHINE ROOM DEPTH <td>T/sheave</td> <td>φ 400</td> <td>D/sheave</td> <td>φ 400</td>	T/sheave	φ 400	D/sheave	φ 400
OH	OVERHEAD HEIGHT <td>MRH</td> <td>MACHINE ROOM HEIGHT <td>car sheave</td> <td>φ 520</td> <td>CW sheave</td> <td>φ 400</td> </td>	MRH	MACHINE ROOM HEIGHT <td>car sheave</td> <td>φ 520</td> <td>CW sheave</td> <td>φ 400</td>	car sheave	φ 520	CW sheave	φ 400
CAR DBG	DISTANCE BETWEEN CAR GUIDE RAILS			shaft	HW 2000	mm x HD 2050	mm
CWT DBG	DISTANCE BETWEEN COUNTERWEIGHT GUIDE RAILS			Cabin	CW 1400	mm x CD 1350	mm
				Door	OP 800	mm x OPH 2100	mm

Ventilation grid reserved hole

Bottom box Lop: 100x50 (base station) 100x400 (remaining stations)  
No bottom box Lop hole: φ50 hole

**Technical Requirement**

- Power supply: machine room need equiped with power supply. Power supply box need be locked. Power supply should be 3P.5 wires, 380V 50Hz. Voltage tolerance ±7%, input power more than 50% of motor power, also equiped with air switch same capacity with power supply, also allow the supplement leakage protector. When use VVVF, need use special leakage switch. Ground resistor should be < 4Ω. It should use insulated conductor from floor to machine room. Keep separate for null wire and ground wire.
- Shaft requirement, it should be only for lift, can not install non-related device (pipe, cable, etc), and should keep the person entrance into. The shaft plan size mean the min size measured by plumb line, tolerance ±50mm. Basically not allow the protruding beam and column. The proof pressure of shaft side should be > 24MPa. Recommend to use full concrete, can not use the reserved steel. In case use solid brick, it should use reserved steel or make the ring beam on the surface of reserved steel, height >=300mm. If use hollow brick, can choose C25 concrete fill into the wall, also make the ring beam on the surface of reserved steel, height >=300mm. If the shaft front wall is brick construction, it should make the concrete beam upside of door hole to fix the landing door bracket, height >=300mm. If have the requirement in the drawing, it should make the concrete in the entrance of hall door. It should equiped with lamp, brightness >=50LX, install the lamp at 0.5m from the top and the bottom, in the middle, each lamp at <=1m. The buffer block should be made accompany with special person. Before that need make the reserved 240x25 joint bar, >=12mm, height >=500mm from the pit floor, and should water proof. Keep the space for person entrance. Pit ladder is by user. Should installed it in a suitable place. If there have basement downside of the pit should make the buffer block extend to the solid floor downside. If the floor distance between 2 floor >=1m should set the safe door with the width 350mm, height 1800mm.
- Machine room requirement (not for MRL). It had the passageway for the traction machine. keep the entrance unblocked. the door opens outward, also can be locked. Installed the fan, keep the humidity < 85%, temperature +5℃~40℃, surrounding the reserved hole should make the 50mm hole, keep the floor plan, also bear the load 700kg/m<sup>2</sup>. The motor beam should be supported in the concrete block, this concrete block should extend to the building beam or bearing wall. Bearing side should make the reserved same side steel. thickness 2mm, bearing side thickness should over the wall thickness 20mm, total thickness more than 75mm. Standard wall thickness, recommend the bearing wall thickness >=200mm. The hook in the machine room should indicate the max. load. It should install the ladder and barrier in case have stair.
